- [K-State Extension in Johnson County](#)
- [Tips and techniques to get the most food from your vegetable garden](#)

Seeds (from Burpee) being used in the contest and suggestions for how best to grow them:

1. [Black- seeded Simpson lettuce](#)
2. [Dwarf Blue Curled Vates kale](#)
3. [Hybrid Space Spinach](#)

Containers: Any container that holds no more than 1155 cu. inches of soil or 5 gallons of water (if you chose to grow the plants hydroponically) will comply with contest rules. Remember, the key point is not how much soil you use, rather how *little* you use. The winner is determined by dividing the biomass (weight of the salad greens) by the volume of the growing medium (liquid or solid). At least one plant of each type of seed must survive in the same growing container.

Suggestions:

- plastic rectangular flower box
- seed starter flat containers
- Plastic tub, or 5-gallon bucket, slit in half lengthwise, and taped together with duct tape, add drainage holes
- Shallow wooden box
- Recycled plastic milk container, halved
